

GRANTH - DIGITAL LIBRARY

INTRODUCTION

“Granth” is the digitalization of ongoing library system. It is aimed to automate the existing system of manually working processes and to manage several important activities of library in an online mode. It is designed to manage and track the daily work of the library such as issue books, return books, maintain student details, due calculation, catalogue, and book search etc.

OBJECTIVE

The main objective of GRANTH – VGI DIGITAL LIBRARY is to collect, record, assemble, retrieve, and make available the information sources to the information users. It will not improve data accuracy only but also optimize workflows for staff members.

PROBLEM

There is a lot time wastage in visiting library for every small work or it usually happen that librarian is not available. The existing system also involves too much paperwork So, we created online database for library to cope up with these existing problems.

REALTIME APPLICATION

As there is no existing online library system accessible to students and faculties in VGI, we can use GRANTH – Digital Library Portal for managing the library of VGI.

FUTURE SCOPE

It can be easily implemented under various situations and systems. We can add new features as and when we require. There is flexibility in all the modules and submodules.
